

Master Data Analyst

Job ID
REQ-10046419
Apr 01, 2025
Italy

Summary

This role involves identifying, analyzing and ensuring the accurate migration of financial entity-related data, with a strong emphasis on data integrity and accuracy. Given the complex and dynamic nature of the Supply Chain, Master Data Analysts (MDAs) must understand and analyze data flows between multiple interconnected systems.

MDAs will gain a comprehensive understanding of the processes and sub-processes utilized daily by various departments, ensuring seamless data migration while proactively identifying and resolving inconsistencies or system misalignments. Their primary focus will be on data comprehension, manipulation, and integration within a specific segment of the holistic data flow.

Each MDA will act as the Single Point of Contact (SPoC) for data-related queries, error resolution, and system discrepancies within their assigned segment.

MDAs will be responsible for ensuring smooth data integration across systems and will actively contribute to continuous process improvements and risk mitigation. The key requirement for this role is the ability to understand how data flows across systems and how interconnected systems communicate to identify required insights and resolve discrepancies.

About the Role

Key responsibilities:

- Identify and categorize all financial entity-related data to support accurate migration and consolidation.
- Ensure data consistency across multiple platforms and resolve any inconsistencies within interconnected systems.
- Understand and analyze data flows within various systems used in the Supply Chain, gaining full comprehension of end-to-end business processes.
- Work closely with cross-functional teams, including Finance, IT, and Supply Chain, to facilitate seamless data migration and system integration.
- Act as the Point of Contact for assigned data flows, troubleshooting discrepancies, and proactively resolving data/system issues.
- Continuously monitor, evaluate, and recommend improvements in data handling, system integration, and workflow efficiency.
- Maintain detailed documentation of data structures, migration processes, and issue resolutions for reference and auditing purposes.

Essential requirements:

- Degree in relevant field (IT, Data Science etc)
- Minimum experience in data governance, cleaning, validation, and migration in an enterprise environment.
- Strong working knowledge of Microsoft Dynamics 365, SAP (various modules), and other enterprise ERP systems.
- Ability to query, analyze, and manipulate data in relational databases using SQL.
- Experience in data architecture, modelling, and mapping, ensuring seamless integration across systems.
- Strong analytical skills to assess and understand business processes, workflows, and dependencies in an international environment.
- Fluent in English.

Desirable requirements:

- Experience with ETL (Extract, Transform, Load) tools and data integration frameworks.
- Familiarity with Power BI, Tableau, or other reporting and visualization tools.

We offer a **temporary contract** of 12 months as a starting point.

Why Novartis: Helping people with disease and their families takes more than innovative science. It takes a community of smart, passionate people like you.
