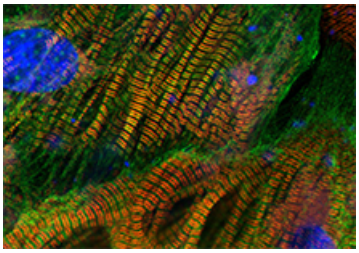
NOVARTIS

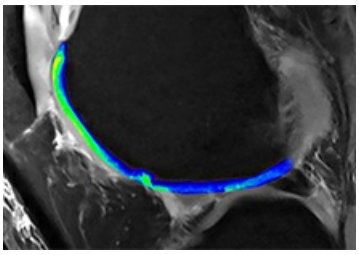
Research disease areas

We work across multiple therapeutic areas to uncover biological insights to drive the discovery and development of the next generation of medicines. From the inception of a therapeutic through early clinical development, our disease area teams collaborate across scientific disciplines and organizations in support of our mission to improve and extend peoples' lives.



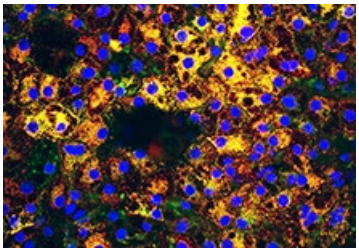
Cardiovascular and metabolic diseases

Our Cardiovascular & Metabolic Diseases team works to better understand the root causes of cardiovascular and metabolic diseases, and discover and develop therapies against relevant targets.
Learn more



Diseases of aging and regenerative medicine

The DARe group is focused on elucidating and targeting the molecular mechanisms underlying diseases of aging and developing potential regenerative pharmacological interventions that restore tissue integrity and function.

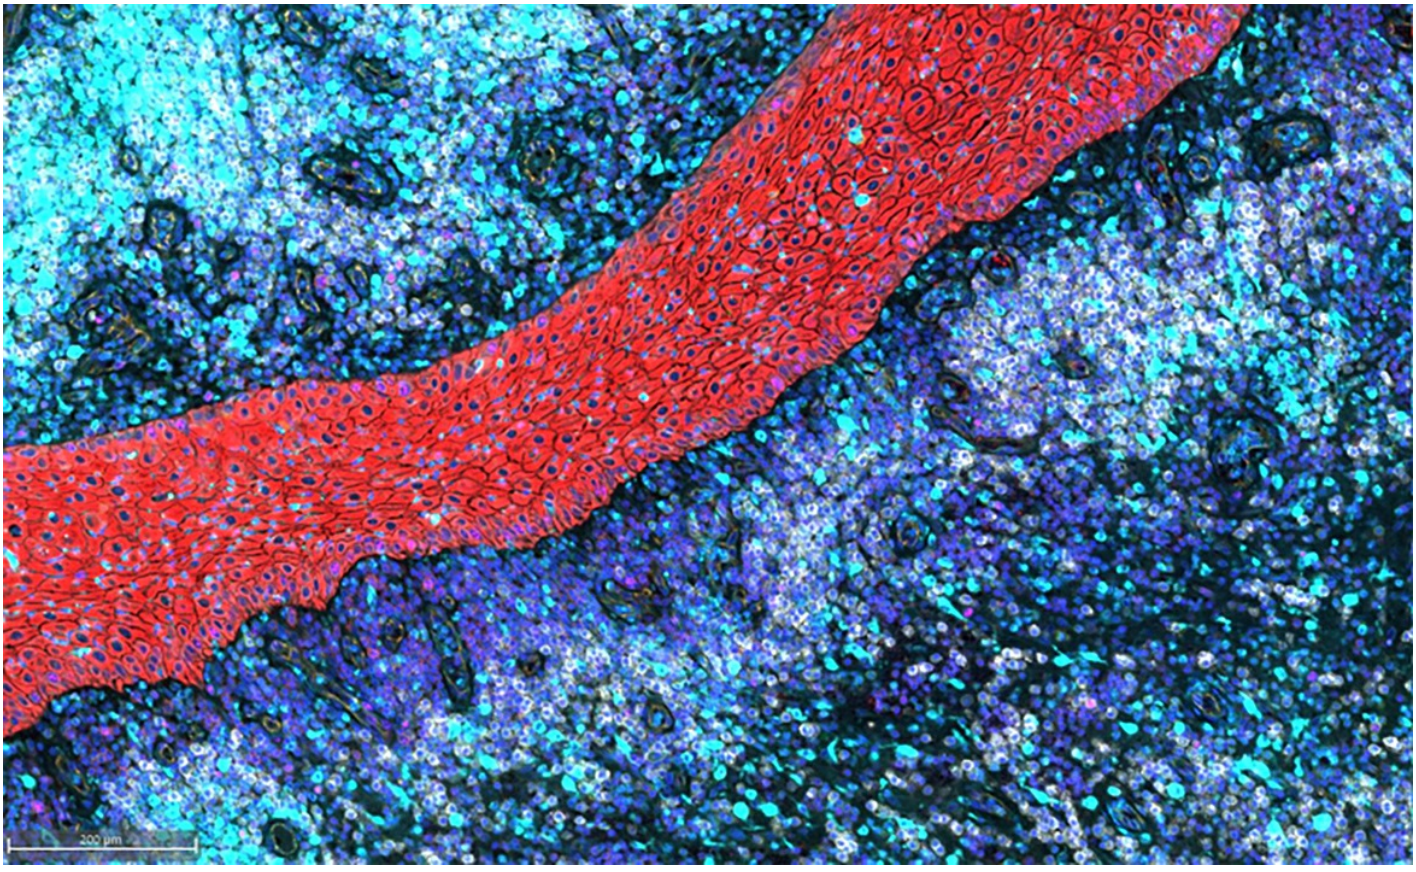


Exploratory disease research (DAx)

DAx catalyzes and drives transformative therapies for emerging, high-potential indications. Current research focuses on liver and kidney diseases, and fibrosis.
Learn more

Global health

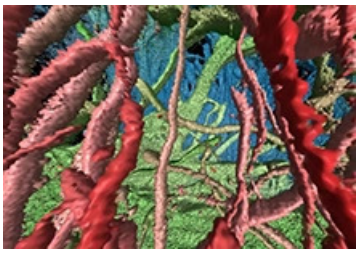
The Global Health Disease Area (DA) is discovering novel medicines to help control and, ideally, eliminate diseases impacting some of the world's most vulnerable and underserved populations.
Learn more



Immunology

The Immunology group is developing transformative therapies, including small molecules and biotherapeutics, that target the root cause of disease by modulating the immune system to restore health.

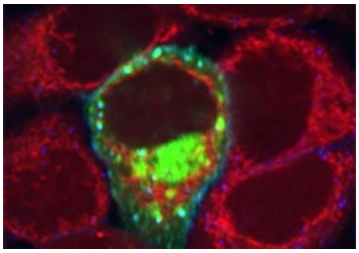
Learn more



Neuroscience

Our neuroscience research team works to discover transformative therapies that address the underlying cause of neurodegenerative, neurodevelopmental and neuropsychiatric diseases to dramatically improve the lives of patients.

Learn more



Oncology

Our Oncology team is developing a robust portfolio of treatments that destroy tumors selectively and strip away their defenses.
