Next Generation Scientist

Our Next Generation Scientist Program in cooperation with the University of Basel offers internships to talented and motivated scientists from low- and middle-income countries. The three-month program, which takes place at the Novartis research site in Basel, aims to promote both the scientific and professional development of the researchers.

Under the guidance of Novartis mentors, participants work on a mutually agreed scientific or clinical research project and participate in a leadership development program to strengthen their communication and decision-making skills. As part of research projects, participants use the latest methods and work with leading experts in the respective fields with the aim of later applying what they have learned in their countries. An important element of the programs is that both sides learn from each other: scientists and physicians from Novartis and the University of Basel benefit from the program by

developing a deeper understanding of the world of science and healthcare in other countries.

Latest stories

Unique insights and perspectives from people across Novartis.

How I found my true purpose at Novartis

I started my career as a research fellow in Singapore, doing basic research. It was interesting work, but I always felt there was something missing.

Mentoring matters: how we grow together at Novartis

You can be successful, as an individual or as a business, without having to do it all on your own.

Belonging here: How Novartis helped me come out as a transgender woman

When I was in my late forties, I came to the realization that I was transgender. I signed up with a transgender clinic in Basel and went through a period of counselling.
