

US Manufacturing Expansion

Novartis plans to Expand its US-based Manufacturing and R&D Footprint

The company will make a total investment of \$23B over the next five years, creating:

- Expanded US manufacturing and R&D presence with investment in 10 facilities, including 7 brand new facilities
- New manufacturing capacity: Novartis will be able to produce 100% of its key medicines end-to-end in the US, a significant increase from current levels
- Increased R&D presence, including a new research hub in the San Diego area to tap some of the best and brightest minds in America.

Our planned \$23 billion investment over 5 years in US-based infrastructure will ensure all key Novartis medicines for US patients will be made in the United States. This commitment enables Novartis to expand on its current manufacturing, research and technology presence across the country, creating nearly 1,000 new jobs at Novartis and approximately 4,000 additional US jobs. The production capacity will cover both active pharmaceutical ingredients (API) and biologics drug substance, as well as secondary production and packaging.
